

The Policy of **Estampaciones Metálicas MOYMA, S.L. (MOYMA)**, dedicated to the stamping, deep drawing, cutting and welding of metal parts, is defined on the basis of the expectations and needs of our customers and interested parties, and the nature, magnitude and environmental impact of the activities, products and services developed. It includes therefore, the objectives and commitments of Quality and Environment, appropriate to the purpose and context of the organisation.

For this reason, MOYMA has decided to be certified under the IATF 16949 and UNE-EN ISO 14001 standards and thus improve the quality of the products supplied to customers in awareness with the environment, increasing their satisfaction, always taking into account **compliance with all requirements**, including **legal requirements**, both those applicable to processes and products (including those relating to product safety), as well as environmental ones.

In order to fulfil our commitment to continuous improvement and to ensure that our customers continue to trust us, MOYMA bases its policy on the following points:

- To achieve **customer satisfaction** by detecting their expectations and needs, maintaining a close relationship to have knowledge of the function of our products and thus achieve a better adaptation to their needs.
- Correctly defining the requirements of raw materials and products or processes subcontracted to our **suppliers** to achieve, together with a continuous evaluation of the same, a higher quality in our supplies and environmental compliance on their part.
- To detect and provide **training and motivation** to staff, thus involving all employees and coordinating efforts to meet quality and environmental standards and customer needs.
- Reduce non-conformities in our products with the goal of achieving **zero defects**.
- Optimising processes for **continuous improvement**, considering the **prevention of pollution**, consistent with the life cycle of the products, and the minimum generation of scrap.
- Detect and provide the technical and human **resources** necessary for the proper performance of **MOYMA's** activities, being, therefore, always informed of the latest technologies to be more competitive every day.
- Collaboration with other interested parties to comply with customer, internal, legal and regulatory requirements.
- Promoting Corporate Social Responsibility as a mechanism to improve relations between Moyma and all stakeholders.

The commitment of **all** with the legal regulations in force, the prevention of accidents at work, concern for the environment, staff training and information, organisation, discipline and continuous improvement, must be pillars that allow us to make our company increasingly competitive.
